## **Growth in Agriculture**

8.3 Low and volatile growth rates in Indian agriculture and allied sectors was reflected in the average annual growth rate of value added in the sector declining from 4.7 per cent during the Eighth Plan (1992-1997) to 2.1 per cent during the Ninth Plan (1997-2002) (Table 8.3). As against the target of annual growth rate of 4 per cent during the Tenth Plan (2002-2007), agricultural growth rate in the first year (2002-03) was negative (-6.9 per cent) due to a severe drought of 2002. With a favourable monsoon, growth was an impressive 10.0 per cent in 2003-04. But deficient rainfall in 2004-05 again caused a decline of food grains production as well as rate of growth of Agriculture and allied sectors to 0.7 per cent. The advance estimates of National Income for 2005-06 released by the CSO on February 7, 2006 has estimated a growth rate of 2.3 per cent for the agriculture and allied sectors based on New Series (at 1999-2000 prices).

8.4 Low productivity has afflicted growth of Indian agriculture (Table 8.4). For example, though India accounted for 21.8 per cent of

global paddy production, the yield per hectare in 2002 was less than that in neighboring Bangladesh and Myanmar, and only about a third of that in Egypt, which had the highest yield level in the reference year. India, while accounting for 12 per cent of global production in wheat, had average yield levels higher than the global average, but only a third of the highest level achieved in the UK in 2002. However, in maize and groundnut, while accounting for 2 per cent and 18 per cent of global output, yield levels were only 39 per cent and 57 per cent of the global levels. In sugarcane, yield was in excess of average global levels.

8.5 While there is some scope for wasteland reclamation, there are obvious limitations to the extensive margins (expansion of acreage) in Indian agriculture. Enhancement of agricultural growth is essential for achieving an overall GDP growth rate in the range of 8 to 10 per cent, and improved productivity is critical for achieving accelerated agricultural growth.

Table 8.3 : Annual average growth rate (at constant prices)					
Five Year Plan	Overall GDP growth rate	Agriculture & Allied Sectors			
Seventh Plan (1985-1990)	6.0	3.2			
Annual Plan (1990-92)	3.4	1.3			
Eighth Plan (1992-97)	6.7	4.7			
Ninth Plan(1997-2002)	5.5	2.1			
Tenth Plan (2002-07)					
2002-03	3.8	-6.9			
2003-04(P)	8.5	10.0			
2004-05(Q)	7.5	0.7			
2005-06(A)	8.1	2.3			

P: Provisional, Q: Quick estimates, A: Advance estimates

Note: Growth rates prior to 2001 based on 1993-94 prices and from 2000-01 onwards based on new series at 1999-2000 prices.

at 1999-2000 prices.
