<sup>(a)</sup> Gross Capital Formation (GCF) is estimated by two approaches: – (i) through flow of funds, derived as Gross Saving plus net capital flow from Rest of the World (RoW) (Column 17 of above table) ; and (ii) by the commodity flow approach, derived by the type of assets (Column 15 of above table).

Errors and omissions as indicated in Column 16th is not published in the National Accounts Statistics. The difference of GCF compiled by using above two approaches has been reflected as Error and Omissions in Column 16 as already indicated by DEA for previous years.
